

Dan Șelaru – IT Coordinator

Mr. Dan Șelaru is a researcher since 1991 in the domain of dynamical systems with applications in celestial mechanics. As a mathematician, Dan has been involved in over 15 public and private R&D projects as coordinator or a member of project team.

In parallel with the scientific research, Dan worked as coordinator of commercial projects. One of the tasks he accomplished was to select the hardware necessary to complete the project's objectives; he also participated in the installation of hardware in locations specified by customers. These projects have usually involved large databases. He participated in setting the requirements and at the design of these databases. Extracting relevant features of acquired data was also a subject of Dan's research. He, also, coordinates IT projects.
